## Executive Summary

A critical anomaly was detected on the digital twin for the device. The system automatically generated this report to capture a snapshot of the observed behavior, analysis results, and recommended next steps for investigation and remediation.

## Digital Twin Analysis

The LSTM autoencoder measured the reconstruction error and compared the incoming traffic features to the expected baseline. These discrepancies were used to compute a Trust Score and to highlight the most anomalous data attributes.

| Metric                     | Value   |
|----------------------------|---------|
| Trust Score                | 14.9%   |
| Reconstruction Error (MSE) | 0.47143 |
| Jensen-Shannon Divergence  | 0.40801 |

## Top Anomaly Contributing Features

| Feature     | Delta |
|-------------|-------|
| Entropy     | 0.700 |

Possible Attack Pattern

Data Exfiltration (large payloads + high entropy)

Risk Assessment

Based on the observed anomaly magnitude and the estimated severity, this incident is considered **CRITICAL**. The device should be treated as compromised until a full investigation confirms otherwise.

Recommended Remediation Actions

- Isolate the device from the network (quarantine).
- Collect full packet captures and system logs for post-incident analysis.
- Perform a firmware integrity check and verify configuration drift.
- Rotate credentials and revoke all active sessions for the device.
- Update IDS/IPS rules to detect similar behavior in the future.
